Re: **Thrifty Oil Co. Station #406**
1902 Sunset Cliff Blvd.
San Diego, California
DEH-SAM Release #H05358-002

Subject: Semi-annual Status Report – First Half 2005

Dear Mr. Felix:

Please find enclosed herewith the First Half 2005 Status Report for Thrifty Oil Co. Station #406, located 1902 Sunset Cliff Boulevard, San Diego, California.

If you should have any questions or comments regarding this transmittal, please do not hesitate to contact either Jim Zenor or myself at (562) 921-3581.

Sincerely,

Chris Panaitescu
General Manager
Environmental Affairs

THRIFTY OIL CO.

First Half 2005 Status Report Thrifty Oil Co. Former Station #406 June 23, 2005

Site Information:

Site address:	TOC SS #406 (ARCO #9751) 1902 Sunset Cliff Blvd. San Diego, CA
Global ID No.:	T0607301695
EDF Confirmation No.:	6663805127 and 7521980047
Lead Agency No.:	H05358-002
Lead Agency:	San Diego Co. Dept. of Env. Health
Agency Contact:	Mr. David Felix / 619-338-2258
Project Manager / Phone Number:	Jim Zenor / 562-921-3581 ext. 427

Field Activity:

Groundwater wells onsite:	9
Groundwater wells offsite:	11
Date(s) monitored:	4/21/05
Date(s) sampled:	4/21/05 and 4/22/05
Groundwater wells gauged:	20
Groundwater wells sampled:	18 (well MW-1 and TDD-1 not accessible)
Purging method:	Pump
Treatment / disposal method during sampling event:	Mobile treatment unit
Groundwater wells with free product:	0
Free product thickness (feet):	0
Free product removed this period (gals.)	N/A
Free product removed to date (gals.):	N/A

Site Hydrogeology:

Depth to groundwater (feet bgs):	2.56 to 5.30
Groundwater elevation (feet relative to MSL):	21.84 to 28.41
Groundwater gradient and flow direction:	0.02 ft/ft, Northeasterly
Consistent with previous gradient/flow direction:	Yes

Groundwater Conditions:

TPH-G concentration (ug/L)	ND<15 to 64,800
Benzene concentration (ug/L)	ND<0.04 to 6,780
Toluene concentration (ug/L)	ND<0.02 to 5,020
Ethyl benzene concentration (ug/L)	ND<0.02 to 3,030
Total xylenes concentration (ug/L)	ND<0.06 to 6,980
MTBE concentration (ug/L)	ND<0.18 to 1,920
DIPE concentration (ug/L)	ND<0.29 to <29
ETBE concentration (ug/L)	ND<0.17 to <17
TAME concentration (ug/L)	ND<0.28 to 30
TBA concentration (ug/L)	ND<10 to 2,880

Groundwater Monitoring and Sampling Activities:

- BBC Environmental Inc. performed semi-annual groundwater monitoring and sampling on April 21 and 22, 2005. Tables 1 and 2 present historical groundwater elevation and analytical data. A total of 294.1 gallons were purged prior to sampling and placed in DOT-approved 55-gallon drums treated onsite by BBC and discharged to sewer in compliance with their permit. Free product was not observed in the site wells during this reporting period. Construction activity on April 22, 2005 prevented access to sample wells MW-1 and TDD-1. Semi-annual monitoring and sampling field data sheets are included in Appendix A and analytical reports for the groundwater samples collected during the semi-annual monitoring and sampling are included in Appendix B. Figures 2 through 6 show groundwater elevation contours and concentrations of TPHg, benzene, MTBE, and TBA in groundwater, respectively

Site Assessment, Risk Assessment, and Remedial Activities:

- Due to the presence of a residence (referred to as "house" in Figure 1 just north of well MW-6, an approved soil gas survey was conducted in December 2000 to assess the potential risks to the occupants from benzene in the hydrocarbon plume at the site. The soil gas survey indicated a cancer risk to the residence of $1.07(x10^{-6})$ which is slightly above allowable limits $1.00(x10^{-6})$. Therefore, with the DEH-SAM's approval, Thrifty conducted an additional soil gas survey on April 18, 2001 around the residence to verify the potential risk. Based on the *Soil Gas Survey and Health Risk Assessment Report* dated May 10, 2001, the results of the more recent soil gas survey indicated that the risk to the residence from Thrifty's hydrocarbon plume were within acceptable limits. In a letter dated May 31, 2001, the DEH-SAM concluded that based on the May 10, 2001 report, there does not appear to be a health risk to the residence. In May 2001, the dissolved benzene in well MW-6 was 3000 ug/L. In April 2005, the benzene concentration in well MW-6 was only 49 ug/L and the calculated health risk would also be correspondingly less.
- A Work Plan for Risk Assessment, Site Assessment, and Remedial Feasibility Testing dated July 26, 2002 for the site was prepared by our consultant TRC Alton (TRC) and submitted to the DEH-SAM. The work plan included a proposal to install seven offsite wells (MW-16 through MW-22) to evaluate the lateral extent of the dissolved-phase hydrocarbon plume. The work plan also proposed conducting a risk assessment to

evaluate the necessity of active remediation. If active remediation is found to be necessary, well MW-23 was proposed to be installed as a remediation feasibility testing well. An 8-hour step test would then be conducted on well MW-23, if it did not contain LPH, to determine the constant pumping rate for a 24-hour constant rate discharge test. A DPE pilot test would then be conducted using well MW-23. If the DPE was found to be effective, a remedial action plan would be prepared and submitted to the DEH-SAM.

- In its letter dated March 4, 2003, the DEH-SAM approved the July 29, 2002 workplan with the condition that an additional well should be installed 90 to 120 feet north to north-northwest of existing monitoring well MW-18 as a replacement for well "C" which was proposed but never installed. Thrifty selected GeoHydrologic Consultants, Inc., (GHC) to perform the site assessment and risk assessment. Thrifty was negotiating with the City of San Diego regarding the encroachment permit application but was unable to reach an agreement; however, in a telephone conversation on November 20, 2003, the DEH-SAM stated that the previous requirement for additional assessment at the site, including the installation of additional offsite groundwater monitoring wells that were previously directed by the DEH-SAM, are no longer warranted or required at this time. Thrifty submitted a letter to the DEH-SAM on November 21, 2003 to confirm a phone conversation.
- Geohydrologic Consultants Inc. (GHC) completed a risk assessment and prepared and submitted a *Risk Assessment Report* dated August 11, 2003. The report concluded that there is no health risk posed by the gasoline contamination in the shallow soil and groundwater. GHC recommended free product removal by monthly over-purging from seven wells and treating the contaminated soil that can generate free product. In its letter dated September 16, 2003, the DEH-SAM approved portions of the GHC's recommendations in the August 11, 2003 *Risk Assessment Report* and TRC's July 26, 2003 workplan. The September 16, 2003 SAM letter directed over-purging of the seven wells but required that the over-purging to be conducted using a dual phase extraction (DPE) system, either with a vacuum truck or with a trailer mounted DPE system. Thrifty solicited bids from qualified consultants and on October 17, 2003, selected TRC of San Diego, California to perform the work with their trailer mounted DPE unit. Because a school is located near the site, the San Diego APDC required a public notification of the proposed work prior to granting the permit. TRC submitted the APCD permit application on December 2, 2003.

- After obtaining the required traffic control permit, TRC conducted the DPE episodes on 5/18/04, 6/1/04, 6/14/04, 6/29/04, 7/13/04, and 7/27/04. The maximum influent TPHg vapor concentrations from available laboratory reports were 10,100 ppmV on 5/18/04, 8,470 ppmV on 6/1/04, 7,970 ppmV on 6/14/04, and 10,100 ppmV on 6/29/04, 8,290 ppmV on July 13, 2004; and 4,690 ppmV on July 27, 2004. Approximately 275 pounds of hydrocarbons at a rate of 6 pounds per hour and approximately 6,875 gallons of groundwater were extracted during the six 8-hour DPE events. The results were included in TRC's *Dual-Phase Extraction Report* dated October 29, 2004. As you requested in a phone conversation on December 9, 2004, Thrifty asked TRC to revise the report to include additional information and revised recommendations. In response, TRC prepared and submitted a *Revised Dual-Phase Extraction Report* dated December 15, 2004. The revised report included recommendations to continue semi-annual groundwater monitoring and sampling for one year. If free product does not reappear by the second half 2005, TRC's recommended agency consideration of regulatory closure if free product does reappear and proposed 3 additional 12-hour monthly DPE events.
- In a letter dated February 14, 2005, the DEH-SAM requested that a CAP be prepared which would evaluate risks and if appropriate, propose no further action. Following DEH-SAM review and approval, the CAP would be submitted to adjacent property owners. GHC was selected following standard bidding protocols to prepare the CAP and perform the required notifications. In its *Corrective Action Plan* dated May 9, 2005, GHC concluded that there was not a significant risk to human health and the environment and recommended regulatory site closure. The CAP was conditionally approved by the DEH-SAM in a letter dated May 23, 2005. The conditions included the requirement to provide a copy of the notice and a list of the persons to be notified. In a letter dated June 16, 2005, GHC submitted the notification letter and a list of the parties to be notified to the DEH-SAM for review and approval. Following the approval by the DEH-SAM, GHC will submit the notification letters to the appropriate parties. If there are no negative responses after 30 days, it is our understanding that the DEH-SAM will evaluate the site for regulatory closure.

Future Activities

- Until receiving closure from the DEH-SAM, BBC will continue semi-annual groundwater monitoring, sampling;
- Thrifty will continue semi-annual reporting. If free product does not reappear by the second half of 2005, Thrifty may request consideration for regulatory site closure, if appropriate.

Interpretations expressed herein are based solely upon data collected and provided by TRC, BBC and Associated Laboratories. Should you have any questions regarding this report or require any additional information, please contact the undersigned at 562-921-3581.

Sincerely:

James M. Zenor

ND = Nondetectable

Benzene, toluene, ethylbenzene, and xylene analyzed by EPA method 8020.
Total petroleum hydrocarbons (TPH) analyzed by EPA method 8015 modified for gasoline

TABLE 1
GROUNDWATER DATA
THRIFTY OIL STATION #406, OCEAN BEACH, CA

SAMPLED	ANALYTICAL PARAMETERS					DEPTH TO GROUNDWATER (feet)	PRODUCT THICKNESS (feet)	CASING ELEVATION (feet)	GROUNDWATER ELEVATION (feet)
	TPH ($\mu\text{g/L}$)	BENZENE ($\mu\text{g/L}$)	TOLUENE ($\mu\text{g/L}$)	EthylBenzene ($\mu\text{g/L}$)	XYLENE ($\mu\text{g/L}$)				

"_ = Not analyzed / Not available

* MTBE 8020 / 8260

Wells resurveyed on 9/27/00

Methyl-Tert Butyl Ether (MTBE) analyzed by EPA method 8020 or 8260

Beginning 8/14/2000, BTEX and MTBE analyzed by EPA Method 8260B

On 11/18/02, 5/30/02, 11/21/01 and 5/24/01, BTEX analyzed by EPA Method 8021B

**RE: TRANSMITTAL OF SECOND QUARTER 2005 GROUNDWATER
SAMPLING FIELD DATA SHEETS FOR THRIFTY OIL COMPANY
STATION No. 406 LOCATED AT 1902 SUNSET CLIFFS BLVD.,
SAN DIEGO, CALIFORNIA**

Dear Mr. Zenor:

BBC Environmental, Inc. (BBC) performed groundwater monitoring and sampling activities at the above referenced location on April 21st & 22nd, 2005. Please find enclosed one copy of the BBC Groundwater Sampling Field Data Sheets for this second quarter event.

Should you have any questions with regards to this matter, please do not hesitate to contact me directly at (760) 740-1191.

Sincerely,

Walter B. Craig, R.E.A.
Principal Engineer

Enclosures (4): Groundwater Sampling Field Data Sheets (2Q-05)

ENVIRONMENTAL BARREL / DRUM INVENTORY

Date of Inventory: 4/22/05
(sometime is different than generation date)

Personnel / Company: BRI ENV.
(doing this inventory)

SITE INFO: STATION # 406 ADDRESS 1902 Sunset Cliffs Blvd
San Diego CA
CITY

Please fill out this inventory form COMPLETELY and IN DETAIL.
Make sure you include ALL drums onsite, not just the drums you are generating.
Please write in Block Letters, longhand writing may not be legible.

Upon completion, please submit / fax this inventory form to:

Earth Management Co.

Cooler Receipt Form

Client: Timmy Project: 700446Date Cooler Received: 4/15 Date Cooler Opened: 4/15/05

Was cooler scanned for presence of radioactivity ?

Yes/No

If yes was radioactivity results above 25 cpm ?

Yes/No

Was a shipper's packing slip attached to the cooler ?

Yes/No

If the cooler had custody seal(s), were they signed and intact ?

Yes/No/Na

Was the cooler packed with: Ice Ice Packs Bubble wrap
Styrofoam Paper None Other Cooler Temperature: 4.2°

*cooler needs to be received @ 4°C with an acceptable range of 2°- 6 °C

If samples were hand delivered do they meet the temp. criteria, which should be @ 4°C with an acceptable range of 2°- 6 °C ?

Yes/No

If no explain: _____

Were all samples sealed in plastic bags ?

Yes/No

Did all samples arrive intact ? If no, indicate below.

Yes/No

Were all samples labeled correctly ? (ID's Dates, Times) If no, indicate below.

Yes/No

Can the tests required be ran with the provided containers, If no indicate below.

Yes/No

Was sufficient sample volume sent for all containers ?

Yes/No

Were any VOA vials received with head space ?

Yes/No/Na

Was the correct preservatives used ?

Yes/No/Na

If no, see the pH log for a list of samples containers regarding pH.

Any other important information: _____

Cooler Receipt Form

Client: Thrifty Project: TTC 466

Date Cooler Received: 4/15 Date Cooler Opened: 4/15/05

Was cooler scanned for presence of radioactivity ? Yes/No
If yes was radioactivity results above 25 cpm ? Yes/No

Was a shipper's packing slip attached to the cooler ? Yes/No

If the cooler had custody seal(s), were they signed and intact ? Yes/No/Na

Was the cooler packed with: Ice Ice Packs Bubble wrap _____
Styrofoam Paper None Other _____

Cooler Temperature: 4.1°C *

*cooler needs to be received @ 4°C with an acceptable range of 2°- 6 °C

If samples were hand delivered do they meet the temp. criteria, which should be @ 4°C with an acceptable range of 2°- 6 °C ? Yes/No

If no explain: _____

Were all samples sealed in plastic bags ? Yes/No

Did all samples arrive intact ? If no, indicate below. Yes/No

Were all samples labeled correctly ? (ID's Dates, Times) If no, indicate below. Yes/No

Can the tests required be ran with the provided containers, If no indicate below. Yes/No

Was sufficient sample volume sent for all containers ? Yes/No

Were any VOA vials received with head space ? Yes/No/Na

Was the correct preservatives used ? Yes/No/Na
If no, see the pH log for a list of samples containers regarding pH.

Any other important information: _____

Receiving Department: M Date: 4/15
